

Chem@Work

Sage X3 for Chemical

Chemical industry challenges, solved.

Addressing the unique business requirements of the chemical manufacturing and distribution industry.

Built for Sage X3, **Chem at Work** combines the industry insight of chemical manufacturing professionals with the skill and deep experience of Net at Work's team of Sage X3 experts.

Chem at Work + Sage X3

Sage X3, a leading ERP business management system offers best-in-class financial, supply chain, and production management for chemicals manufacturers and distributors. Combine the X3 enterprise solution with the enhancements of Chem at Work and the solution is complete.

Key Benefits Include:

A suite of best practices, features, reports, dashboards, queries, and visual process flows designed specifically for the chemical industry.

Maintenance & support for all Chem at Work enhancements to ensure compatibility with future versions of Sage X3.

New features, reports, inquiries, & services released to subscribers on a semi-annual basis.

Participation in a chemical-specific customer roundtable to learn from your peers and provide feedback and suggestions on future Chem at Work enhancements.

Core Features of Chem at Work

Restricted Inventory

Native Sage X3 allows restriction of whether sites can store product. Extending this capability, Chem at Work provides additional functionality to manage these restrictions by:

- Prohibiting the sale of restricted products without appropriate regulatory documentation
- Managing purchase orders or blocking receipt of a restricted product
- Distinguishing between branches that are approved to order/receive restricted product and those that are not
- Ensuring maximum stock quantities at each branch site are not exceeded
- Attaching certification and tracking expirations to provide proactive notice of certification lapses

Enhanced Notes

Sage X3 enables users to create customer, supplier, and product notes in an easy and convenient manner. Chem at Work provides an additional layer of detail on top of this native functionality as information may be specific to a branch, product, and/or business partner address.

- Further specification of when notes should appear
- Includes specificity for ship to, ship by, stat group 1, branch
- Extends pop up, display, and printing of notes to assigned documents like quote, order, delivery, and bill of lading transactions

Core Features of Chem at Work

Safety Data Sheets (SDS) Management

Most Sage X3 users have third party software to publish these documents but need a way to store and manage and archive the documents inside of Sage X3.

Chem at Work provides an SDS management tool designed around SDS storage and transmission business processes that is fully integrated with Sage X3.

- Generation, storage and flexible recall of SDS documentation
- Produce compliant Safety Data Sheets by product
- SDS distribution by customer specific frequency with communication history
- Customer contact-specific document format(language), emailing and/or printing
- Import template for pre-existing, or external system or supplier produced SDS documents

Document Distribution

Chemical Companies generate a large volume of documents for transportation and handling of products. Historically, this has meant piles of paper.

Chem at Work provides a more streamlined experience for document distribution. With Chem at Work you can:

- Specify which documents will be distributed (including SDS attachments)
- Stipulate which contacts get which documents and via which method – print or email

Progressive capabilities designed specifically for chemical.

Core Features of Chem at Work

Advanced Pricing

Sage X3 provides a large set of features enabling users to analyze data for improved decision-making. Realtime analytics, alerts, and notifications empower each role in your organization to respond quickly to changing business conditions. Chem at Work extends the native functionality of Sage X3 with:

- A workbench that loads information from pricing, product, and other modules of Sage X3 to help you analyze and set new/future pricing for loading into X3
- Data for consideration includes sales analysis, costing, logistics, units of measure, and currencies
- What-if scenario building and manager approval before loading the price as active in Sage X3
- Reporting to assist in pricing management and review for analysis

Container Tracking & Management

Chem at Work's all-inclusive container tracking and management solution uses Sage X3 native functionality to meet the business requirements for tote management in the chemical manufacturing and distribution industry.

- Protect your capital investment in specialized, high-capacity reusable packaging
- Streamlined process to track, manage and maintain leased or loaned totes, drums and other containers
- Monitor deposits, locations of containers, container returns, and cleaning & maintenance of containers
- Full life cycle container traceability including contents and customer usage
